

## Highlights:

- Spiral shielding
- Individual jacketed pairs
- 26 AWG balanced signal section
- 3G2.5 (13 AWG) power section

## Product information:

The PAC52 is a high quality signal and power cable in one jacket. This kind of cable is designed to fulfill all demands when using active loudspeakers. The cable consists of a power cable and a balanced signal cable. A general outer jacket with an O.D. of 16 mm and made of flexible PVC protects each inner cable against abrasion. The inner power cable contains 3 conductors with a section of 2.5 mm<sup>2</sup>, protected by a PVC jacket with an O.D of 9 mm. The signal section is balanced and contains two twisted inner conductors of 0.125 mm<sup>2</sup> with an excellent shielding to prevent any influence of hum, noise, radio interference and magnetic fields. The signal section is also protected by an outer jacket of PVC with an O.D. of 3.5mm. The PAC52 cable finds its application in mobile systems where power and signal are desired to be in one cable (active speaker systems) and is specially designed for high power systems.
